MASS SPECTROMETERS
for Thin Films, Plasma & Surface Engineering

Hiden Analytical have been designing and developing the highest quality quadrupole mass spectrometer based systems for over 35 years. We have built a reputation for delivering instruments with superior sensitivity, accuracy and reproducibility together with a first class global service and applications support network.

Thin film processing in research, development and functionalisation of surfaces has a broad application range in microelectronics, nanotechnology, solar, flat panel, mechanics, optics, photonics, textiles, coatings, chemistry, biology and medicine.

THIN FILM PROCESSING UTILISES A WIDE RANGE OF TECHNIQUES, INCLUDING:

- Magnetron sputtering
- ALD – Atomic Layer Deposition
- CVD – Chemical Vapour Deposition
- MOCVD – Metal Organic Chemical Vapour Deposition
- PECVD – Plasma Enhanced Chemical Vapour Deposition
- MBE – Molecular Beam Epitaxial growth
- RIE – Reactive Ion Etch
- IBE/RIBE – Ion Beam Etch and Reactive Ion Beam Etch

Each technique is often tailored for a specific application, requiring special process parameters to produce the surface/film properties required.

Hiden mass spectrometers provide critical insight into thin film processing and characterisation enabling optimisation of thin film production and surface quality. Hiden systems are individually configured to ensure optimum analyser response for sensitivity and speed.
Contents

HMT - High Pressure Residual Gas Analyser
HPR-30 & RGA - Process and Residual Gas Analysis
PSM - Plasma Sampling Mass Spectrometer
EQP SERIES - Analysis of Positive and Negative Ions, Neutrals and Radicals
HPR-60 MBMS - for Ion and Radical Analysis at Atmospheric Pressure
ESPion - Advanced Langmuir Probe for Plasma Diagnostics
IMP-EPD - End Point Detector for Ion Beam Etch
XBS - Deposition Rate Monitor for Molecular Beam Analysis and Deposition Control
TPD WORKSTATION - A System for UHV Temperature Programmed Desorption (TPD/TDS) Studies
SECONDARY ION MASS SPECTROMETRY (SIMS) SYSTEMS - for Materials and Surface Analysis
SIMS COMPONENTS - Add SIMS Capability
SIMS SOFTWARE - SIMS Mapper, Ion Gun Controller
MASsoft PROFESSIONAL SOFTWARE - Flexible, Powerful Software for a Wide Range of Applications

MCS - Multi-channel scaler mode for pulsed plasma analysis
Monitoring vacuum processes with a conventional RGA at pressures >10⁻⁴ mbar typically requires the addition of differential pumping. Alternative analyser types optimised for high pressure operation have degraded sensitivity at low pressures.

The innovative Hiden HMT analyser enables operation at high pressure yet maintains full RGA performance at high vacuum with dual mode operation:

- **UHV mode for high performance residual gas analysis at pressure <10⁻⁴ mbar through to 10⁻¹³ mbar**
- **High pressure mode for measurement at pressures >10⁻⁴ mbar through to 5x10⁻³ mbar**

The performance of the HMT system operating in high pressure mode is illustrated in the graphs below where Argon fill gas flow is increased progressively.

**FEATURES:**

- HMT mode for high pressure operation to 5x10⁻³ mbar
- RGA mode for high sensitivity operation to 10⁻¹³ mbar
- 100 amu mass range
- Stability better than +/- 1% over 24 hours
- Fast access mixed mode scanning
- Real-time background subtraction
The HPR-30 is a residual gas analyser configured for analysis of gases and vapours in vacuum processes and for vacuum diagnostics. The system is fully configurable for individual process applications such as CVD, plasma etching, MOCVD, process gas purity and in-process contaminant monitoring.

The HPR-30 system features a close-coupled re-entrant aperture for sampling directly within the process region, providing maximum data integrity and fast confirmation of process status. Options include the innovative Hiden 3F series triple filter quadrupole system providing enhanced abundance sensitivity, parts-per-billion (ppb) detection levels and high contamination resistance, particularly suited to the analysis of aggressive gases in CVD and RIE applications.

The HPR-30 sampling system configuration is directly suited to analysis of high mass species and precursors used in ALD and MOCVD applications.

**FEATURES/OPTIONS:**
- Custom inlet systems with optimised sampling for metals and metal organic vapours
- High mass range options available – 500 and 1000 amu
- High sensitivity RGA for UHV quality chamber base pressure measurements and leak detection
- Re-entrant sampling orifice for fast response to process gas/vapour composition changes
- Gas/vapour sampling systems optimised for response and sensitivity over a wide pressure range

**HPR-30**

**Process and Residual Gas Analysis**

**PRODUCTS**

**RGA Series** – residual gas analysers for vacuum measurement through to fundamental scientific research.

**DLS-1** with separation of He/D₂, ³He/HD/T and deuterated hydrocarbons (e.g. C,H₂ and C₆D₆) with mass range to 200 amu.

**HPR-30 Series** – vacuum process analysers configured for high sensitivity, fast response gas and vapour analysis of thin film deposition and etching processes: CVD, ALD, MOCVD and RIE for example.

**HPR-30** data on TiN deposition

**HPR-30** Cart - with user adjustable sampling height

**RGA** series

**RPA** series

**HPR-30 Cart**

**HPR-30** data on TiN deposition

**HPR-30**

**Process and Residual Gas Analysis**

**PRODUCTS**

**RGA Series** – residual gas analysers for vacuum measurement through to fundamental scientific research.

**DLS-1** with separation of He/D₂, ³He/HD/T and deuterated hydrocarbons (e.g. C,H₂ and C₆D₆) with mass range to 200 amu.

**HPR-30 Series** – vacuum process analysers configured for high sensitivity, fast response gas and vapour analysis of thin film deposition and etching processes: CVD, ALD, MOCVD and RIE for example.
The Hiden PSM plasma ion analyser is a quadrupole mass spectrometer designed for direct analysis of plasma ions, and neutrals in both plasma characterisation and process diagnostic applications.

The PSM system includes ion extraction/exclusion optics with integral electron impact ioniser, triple filter mass analyser and an in-line energy analyser. The energy analyser enables ion energy distribution measurements for selected plasma ions. The ion extraction/exclusion optics serve to remove the background spectrum effects caused by plasma ions, thereby increasing the overall sensitivity to neutral species sampled from plasma when compared with conventional RGAs. The control of the PSM electron impact ioniser provides for neutral radical analysis by appearance potential threshold ionisation mass spectrometry (TIMS).

Mass range is 300 amu. Energy range is to 100 eV. The plasma sampling orifice insertion length is up to 230 mm.

The interchangeable sampling orifice is mounted in the probe tip. Standard orifices accommodate the pressure regime up to 0.5 mbar with 60 l/s differential pumping. Options extend this range to 2.0 mbar, 20 mbar, 100 mbar and atmospheric sampling.

**APPLICATIONS:**
- Radical and ion analysis in plasma chemistry studies
- Pulsed plasma studies
- Nano particle detection in pulsed plasma
- Plasma etch studies/end point detection
- Pulsed laser deposition studies
- ECR plasma studies

**FEATURES:**
- Positive ion analysis of process plasma ions
- Plasma ion energy analysis with integral Bessel Box energy analyser
- Integral RGA mode for measurement of process neutrals, process contamination and leak detection
- Optional integrated 50 ns Time Resolved Mode for HiPIMS and pulsed plasma studies
- MASsoft Professional PC software
The Hiden EQP Series quadrupole mass spectrometer systems are designed for direct analysis of plasma ion mass and energy in both plasma characterisation and process diagnostic applications.

EQP systems measure both positive and negative ions. The integral electron bombardment ion source enables neutrals analysis and features an advanced appearance potential scanning routine. Additionally, the Electron Attachment Ionisation mode is developed specifically for studies of electro-negative species.

The new EQP series contains a range of high performance quadrupole analysers, suited to a variety of plasma analysis tasks. The EQP-6 with 6 mm quadrupole rod diameter, is offered with mass ranges of 300 and 510 amu, and is based on the Hiden triple filter analyser. The EQP-9 offers the broadest choice of mass ranges, for high stability and mass transmission. Ranges offered are 50, 300, 510, 1000 and 5000 amu. Topping the range is the flagship EQP-20, equipped with an industry first 20 mm rod diameter quadrupole and unique, switchable dual RF zone modes. The EQP-20 is designed for ultra-high mass resolution experiments such as the separation of He and D₂ by mass as well as ultra-high stability analysis up to 200 amu. Energy range is 100 eV as standard, 1000 eV is optional.

The interchangeable sampling orifice is mounted in the probe tip. Standard orifices accommodate the pressure regime up to 0.5 mbar with 60 l/s differential pumping. Options extend this range to 2.0 mbar, 20 mbar, 100 mbar and atmospheric sampling.

The EQP ion optics are adaptable to most plasma chambers, large or small. The plasma sampling orifice insertion can be extended up to 750 mm. Magnetic shielding options provide for operation in magnetically confined plasmas.

The EQP system is suited for advanced plasma research applications including:

**PLASMA APPLICATIONS:**
- HIPIEMS
- ECR – Electron Cyclotron Discharge
- Magnetron Discharge
- Helicon Source
- DC Glow Discharge Plasma
- Pulsed Plasma & Laser Ablation
- Parallel Plate – RF Plasma
- ICP – Inductively Coupled Plasma
HPR-60 MBMS
for Ion and Radical Analysis

The Hiden HPR-60 molecular beam mass spectrometer is a compact skimmer inlet MS for the analysis of reactive gas phase intermediates. Radicals are sampled via a multistage differentially pumped skimmer inlet and transferred to the MS ion source with minimal interaction with other species and without wall collisions. Customisable inlets allow connection to many different reactor systems, including atmospheric plasmas.

The skimmer system, combined with a Hiden triple filter precision mass spectrometer, offers a sampling system with ultra fast response and high accuracy.

- catalytic reactors
- reaction kinetics
- study of transients
- plasma chemistry

FEATURES:
- molecular beam sampling at atmospheric pressure
- +ve and -ve ion analysis
- user replaceable skimmer cones (can be biased)
- electron attachment ionisation mode for the study of electro-negative radicals
- APSI-MS soft ionisation mode for radicals analysis
- mass range options: 300, 510 or 1000 amu
- energy range options: 100 eV or 1000 eV

Hydrated cluster ions from atmospheric dielectric barrier discharge

Mass spectra of the indium containing fractions of the aerosol of InCl₃ in ethanol sprayed at room temperature. The lowest row is the background measurement in the chamber before aerosol generation. The middle spectrum is directly recorded as the aerosol is switched on and the top spectrum is measured after 2 min of spraying into a tube held at room temperature.

S Gledhill et al. 2011 Thin Solid Films 519 6413-6419
ESPion
Advanced Langmuir Probe for Plasma Diagnostics

The ESPion Langmuir probe provides for measurement of the electrical properties of plasmas including:

- Plasma potential
- Floating potential
- Electron temperature
- Electron density
- Ion density
- Electron energy distribution
- Ion flux

Routine monitoring of the I-V plasma characteristic by the Hiden ESPion probe gives direct information relating to plasma stability and reproducibility. Automatic real-time extrapolation of plasma parameters gives detailed information on plasma properties for use in characterisation and uniformity monitoring.

The ESPion system employs Orbital Motion Limited (OML) and Allen Boyd Reynolds (ABR) as standard plasma models for low pressure plasma characterisation.

The Hiden automatic Z-drive provides for spatially resolved measurements across the plasma volume. The standard Z-drive translation options are: 300, 600 and 900 mm.

FEATURES:

- Ion and electron density over the range $10^{14} - 10^{19} \text{ m}^{-3}$
- Electron temperature up to 10 eV
- Electron Energy Distribution Function (EEDF)
- Plasma potential
- Floating potential
- Debye length
- Developed for pulsed, DC, RF and ECR plasma
- Integrated signal gating for pulsed plasma analysis
The IMP-EPD is a differentially pumped, ruggedised secondary ion mass spectrometer for the analysis of secondary ions and neutrals from the ion beam etch process. The system includes integrated software with process specific algorithms developed for optimum process control.

The IMP-EPD system is process proven for the production of high specification thin film devices for applications including magnetic thin films, high temperature superconductors and III-V semiconductors.

**END POINT CONTROLS**
- Rising and falling edge algorithms
- Layer counting for End Point on a selected interface in a multilayered stack
- End Point relative to a reference peak
- Automatic signal correction due to wafer rotation

**FEATURES:**
- Automatic End Point Detection
- High resolution End Point, down to < 0.5 nm
- Ruggedised for Processing
- High sensitivity SIMS analysis
- Integrated residual gas analyser mode for process chamber vacuum diagnostics
**XBS**

Deposition Rate Monitor for Molecular Beam Analysis & Deposition Control

The Hiden XBS system is a quadrupole mass spectrometer designed for monitoring multiple beam sources simultaneously and uniquely offers beam acceptance through a 70° cone. Species-specific analogue signals are used for beam intensity output to the users’ source control modules.

Beam acceptance apertures are configured individually for each specific process chamber source position, manufactured as replaceable plug-in elements to enable retrospective modification in event of chamber alteration. Purpose-designed with high contamination resistance for monitoring evaporating components and fragments in MBE processes.

Manufactured with a triple stage mass filter and water-cooled fully-shrouded probe to protect the probe from the radiant heat sources and to inhibit probe contamination.

- **Monitor and control in MBE processes**
- **Molecular beam studies**
- **Multiple beam source analysis**
- **Photoionisation studies**
- **Desorption/outgassing studies**
- **Monitoring and diagnostics of contaminants in the process chamber**
- **High performance RGA with 3F series triple-stage mass filter**
- **High-sensitivity helium leak check mode for vacuum quality verification**

**FEATURES:**

- High sensitivity - minimum detectable partial pressure 2.5x10^{-14} mbar
- Mass range: 320 or 510 amu
- Crossbeam ion source, beam acceptance through +/− 35° to transverse axis
- Beam acceptance apertures configured for beam source positions
- Growth rate determination typically < 0.001 nm (0.01 Å) (species dependent)
- Optional water-cooled shroud
TPD WORKSTATION
A System for UHV Temperature Programmed Desorption (TPD/TDS) Studies

The Hiden TPD Workstation is a complete experimental system for analysis of thermal desorption products by UHV TPD/TDS. The TPD Workstation features a multiport UHV chamber with heated sample stage coupled to a high precision triple filter analyser with digital pulse ion counting detector for ultimate sensitivity and time resolution. The triple filter mass analyser is configured with a cooled shroud giving minimal outgassing with optimum sensitivity of the analyser to desorption products from the sample. A fast sample load lock with sample transfer mechanism is included to provide for rapid sample change. The unique sample transfer mechanism means only the sample is transferred from the load lock to the heater stage ensuring no sample holder outgassing during the TPD experiment.

Hiden’s TPDsoft thermal analysis PC software included with the Workstation provides automatic control of sample temperature integrated with analyser control. TPD analysis routines (e.g. peak integration, deconvolution and background subtraction etc.) are also included in this package.

FEATURES:
- Hiden 3F PIC mass spectrometer for fast data acquisition (> 500 data points per second)
- Multiport UHV chamber for attachment of additional instrumentation (e.g. ellipsometry)
- Sample transfer mechanism and load lock, including gate valve and viewport
- Heated sample stage to 1000°C
- Z-drive for optimum sample/detector positioning
- Bakeout jacket (200°C max)
- Integrated software control of experimental protocols
SECONDARY ION MASS SPECTROMETRY (SIMS) SYSTEMS
for Reliable and Flexible Analysis of Materials and Surfaces

The Hiden family of SIMS systems ranges from automated tools for production control and repetitive analysis, through to full UHV instruments for advanced materials research. All are constructed using industry standard UHV components and are based around the high transmission Hiden MAXIM series spectrometers.

For routine analysis the IG20 gas ion gun (with oxygen) provides unrivalled reliability and ease of use. The Workstation series instruments are also available with the IG5C Caesium ion gun allowing sensitive measurement of electronegative elements as well as the information rich MCs detection mode. Some instruments are also equipped with Sputtered Neutral Mass Spectrometry detection systems, allowing reliable quantification of matrix level components.

Compact SIMS – economical high performance SIMS for routine analysis, education and general laboratory applications.

AutoSIMS – self-contained automated instrument for unattended, programmed, analysis anywhere in a sample area of 100 mm x 60 mm. Available with custom sample holders for greatest efficiency.

SIMS Workstations – fully featured UHV surface analysis tools available with the industry standard oxygen and caesium ion sources, high transmission MAXIM spectrometer with Sputtered Neutral Mass Spectrometry (SNMS) and oxygen jet for topography control. The use of standard components and a large chamber means the systems can also be easily customised.

FEATURES:
- Detect elements, molecules and isotopes
- Static SIMS (surface specific) and dynamic SIMS (depth profiling)
- Nanometre depth resolution
- Chemical imaging
- Quantitative analysis
- Measurement depth from top monolayer to over 30 microns.
A range of easily fitted and configurable SIMS components allow this powerful analysis technique to be used with existing chambers as well as in the construction of bespoke systems for special applications. With nanometre precision and high chemical sensitivity, SIMS is ideal for monitoring the results of deposition, measuring diffusion, investigating failure and reverse engineering in a wide range of material systems.

**FEATURES:**
- Ion guns include electronics for accurate beam current and profile measurement (electron suppressed Faraday system)
- Spectrometers are self-tuning and include an internal ion source for RGA measurement
- Uses the same software packages as the SIMS Workstation
SOFTWARE

SIMS SOFTWARE
Fast, flexible, informative.
All Hiden SIMS instruments run both the Hiden MASsoft Professional and SIMS Mapper Software giving unprecedented flexibility for the expert and reliable easy to use options for more routine tasks.

SIMS MAPPER
The SIMS Mapper software suite collects data as stacked images for later 3D reconstruction and depth profile extraction. Gating of the data stack can be done during and after acquisition in user defined locations. The wide range of export options, built in periodic table and mass interference calculator make the software easy to use and standard templates can be set up to run automatically.

ION GUN CONTROLLER
With a library of saved parameters the ion guns can rapidly switch between bombardment conditions and can be set to start and close automatically. The power supplies are self-monitoring and incorporate controlled ramp rates to protect sensitive components like the Cs source.

MASsoft PROFESSIONAL
All Hiden Mass Spectrometers are supplied with MASsoft Professional mass spectrometer PC control software.
MASsoft Professional software is intuitive and multi-level offering simple operation for a novice user whilst incorporating a broad range of useful and advanced features for the vacuum expert. Software/Firmware data control features available include:

- TTL pulse output
- Programmable signal gating
- Foreground/background counters for automated background subtraction with molecular beam choppers
- Socket interface for control from users' software applications
- LabVIEW drivers
- MCS mode - multi-channel scaler data acquisition with minimum bin width 50 nanoseconds
- Endpoint digital recipe selection for process tool integration
- Endpoint method templates – addressing a wide range of endpoint applications

FEATURES:
- Template driven quick start operation
- Multiple RGA operation over ethernet link
- Real-time data display with zoom feature
- Mixed mode scanning including trend analysis view of selected species from broad mass scans
- Statistical analysis and peak integration
- Accessible data with copy/paste functions and automated data export
- Auto mass alignment
- Integrated mass spectral library
Hiden APPLICATIONS

Hiden’s quadrupole mass spectrometer systems address a broad application range in:

**GAS ANALYSIS**
- dynamic measurement of reaction gas streams
- catalysis and thermal analysis
- molecular beam studies
- dissolved species probes
- fermentation, environmental and ecological studies

**SURFACE ANALYSIS**
- UHV TPD
- SIMS
- end point detection in ion beam etch
- elemental imaging – 3D mapping

**PLASMA DIAGNOSTICS**
- plasma source characterisation
- etch and deposition process reaction kinetic studies
- analysis of neutral and radical species

**VACUUM ANALYSIS**
- partial pressure measurement and control of process gases
- reactive sputter process control
- vacuum diagnostics
- vacuum coating process monitoring
