iRGA

Intuitive RGA monitor

The simple way to keep an eye on your vacuum
iRGA Introduction

- iRGA is a new application for routine vacuum monitoring.
- iRGA is designed to be simple and automatic:
  - automatically provides partial pressure data for the common residual gas and vapours, including hydrogen, helium, water, nitrogen, oxygen, argon and a custom gas.
  - includes a new tablet view where the background colour changes depending on alarm condition.
  - includes a trend view, scan, leak detection and maintenance modes.
- iRGA includes alarm function to send alerts to internal I/O, Wi-Fi and by email.
iRGA – select the mode from the tablet

Once connected with filament on - Select iRGA and the RGA data monitor automatically starts

Connection is by USB, or Ethernet. Filaments and SEM detector are doubly protected with internal and external over pressure protection.
iRGA tablet mode

The common residual gas and vapour Species are monitored together with a colour palette to indicate status:
- Blue = Low
- Green = Normal
- Red = High
iRGA tablet mode

Key points included in iRGA tablet mode:

- Pressure unit choice; mBar, Torr, Pascal or normalised sum
- Real time trend view
- Action engine for alarm
- Trip output messages by email to internal I/O (5 off) and/or to Wi-Fi devices
- Auto ranging: across 10 decades dynamic range with automatic switching between Faraday cup and electron multiplier detectors
Trend Analysis View

A trend analysis view showing the partial pressure of all gases as a function of time is available during live data acquisition and for viewing previous runs as a historical data view.
Two built-in maintenance modes:
• Automatic ion source cleaning by a De-Gas function
• Automatic electron multiplier calibration function

During analysis the detector can be set for Faraday only, SEM only, or to auto switch over Faraday/SEM. The auto switch over has a delay of a few seconds, and is not recommended for transient event monitoring where the partial pressures measured will cross the selected switch over value. The default switch over value is $1 \times 10^{-8}$ mbar.
